Poznań University
of Life Science

Poland is a country with highly developed agricultural sector and agro-food processing. Additionally, „green light” from the current government side has escalated the prospects of Polish biogas market compared to any developed European country, including Germany which stands as the current European leader in the biogas industry.

Investments of around 50 billion zloty in the production of agricultural biogas should become crucial in the field of renewable energy sources according to the Mateusz Morawiecki plan. Careful estimates show that in Poland the use of biomass and agro-food waste (without the usual crops earmarked as corn in Germany) will create more electric power than planned nuclear power plant (3750 MW).

Again utilizing the potential of biomethane production from purified biogas (instead of electric and thermal energy), can become a complete replacement over natural gas imported from Russia.

More importantly, high and stable production of electrical and thermal energy created from biogas can lead the set the target of safe environment along with energy creation.

I cordially invite you to I Polish Biogas Congress!

1ST POLISH BIOGAS CONGRESS

BIOGAS PLANT – DESIGN AND IMPLEMENTATION

*Dear Guest,
while working for a new edition of the magazine „Rynek Biogazu”, being aware to your needs and hearing the words of professor Jacek Dach we finally decided that it is the time for taking another important step to the development of the biogas industry in our country. We are delighted to invite you to I Polish Biogas Congress taking place in Poland as a unique and special event in the Polish arena.*

The potential for biogas in Poland is huge, and the possibilities of doing business in the biogas market are very promising.

For this reason, we decided to facilitate the scope to meet the recognized authorities from the world of science and business in the sector of biogas. We offer you a unique opportunity to look at the latest technologies and research results, learn about the new trends in the development of the market and meet with the leading technology and components for biogas plants, practitioners and representatives from the financial sector.

*I Biogas Congress will be held on 5 and 6 December 2016 in Hotel Ossa**** in Rawa Mazowiecka. Provided that it is the first event of this kind in Poland, we acquired an excellent place to discuss all the problems, opportunities and threats to the development of the industry – in one place, at the same time.*

Hope to see you in I Biogas Congress!
