

The map displays the geographical distribution of 92 biogas plants across Poland. The plants are numbered 1 through 92. A legend in the top right corner identifies the types of plants: blue for standard, red for large, green for small, and brown for industrial. The map includes major cities like Szczecin, Poznań, Wrocław, and Kraków, and neighboring countries Germany and Holland. The map is part of a brochure for the 'Wieloletni Niz' project, which aims to develop a biogas network in Poland.
