CARBON CAPTURE

Dear Sir or Madam,

CO₂ capture technology is growing more and more in the international area - it is a permanent and increasingly important element of the EU climate policy. The number of new installations is systematically growing and existing installations bring economic benefits to investors. More commercial solutions created by the best specialists in the industry are appearing on the market.

Is Poland ready to implement CO₂ capture technology? How to properly organize a supply chain? Is the implementation of CCUS the only way to achieve net zero emissions? Which sectors should cooperate to enable the development of the decarbonization process?

Answers to these and many other questions will appear during the first Carbon Capture Congress in Poland organized by „Magazyn Biomasa” under the patronage of the Energy Center at the AGH University of Science and Technology in Krakow. The Congress will be held on 23rd April 2024 at the Poznan International Fair.

To tackle the climate crisis, politics, finance and private sector must join forces. It is necessary to initiate activities as part of the energy transformation, combining professional knowledge and business for the decarbonization of the economy, including the commercialization of carbon capture and storage.

Are you interested in participating? If so, please contact me.
